PROFESSIONAL SUMMARY

Results-driven Aspiring Software Developer with a solid foundation in Computer Science, software design, and full-stack development. Proficient in architecting scalable web applications using React, Next.js, Node.js, and Firebase. Well-versed in leveraging advanced Data Structures and Algorithms (DSA) to solve complex software engineering challenges, backed by a proven track record of solving 250+ LeetCode problems. Passionate about designing secure, efficient, and user-centric software solutions that bridge modern frontend applications with robust backend infrastructure and Generative AI integrations.

EDUCATION

Bachelor of Technology in Computer Science (Bennett University)

Specialization: Cyber Security

Cumulative Grade Point Average: 7.5/10.0

Greater Noida, UP

Expected: 2027

TECHNICAL SKILLS

- **Languages:** C++, Python, Bash Scripting, JavaScript, HTML, CSS, SQL
- **Frameworks & Libraries:** React, Next.js, FastAPI, Node.js, Express.js, Frida, PyTorch, SQLAlchemy, RESTful API Design
- **Machine Learning & AI:** Large Language Models (LLMs), Generative AI, Ollama, Qwen, DeepSeek
- **Databases:** PostgreSQL, MongoDB, MySQL, Firebase (Firestore, Realtime DB)
- **Developer Tools:** Docker, Celery, Redis, Git, GitHub, Postman, Linux (Debian)
- **Core Competencies:** Dynamic Malware Analysis, Reverse Engineering, Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Secure Coding

EXPERIENCE

UI/UX Design Intern

Jan 2026 – Apr 2026

Syinq

- Collaborated with cross-functional teams to define the core information architecture for the Syinq carpooling platform.
- Engineered the logical data flows for a multi-step ID verification system integrating Government and University credentials.
- Optimized application user flows for "Find" and "Offer" marketplace features, significantly reducing user friction.
- Designed high-fidelity prototypes to guide development of modular, reusable frontend components.

Software Developer Intern

Apr 2025 – July 2025

Unified Mentor Pvt. Ltd.

- Developed "Collezise," a full-stack web application streamlining college guidance for students using React.
- Implemented complex institutional data retrieval algorithms and personalized list generation logic.
- Architected robust backend API endpoints using Node.js and integrated Firebase for real-time data synchronization.

PROJECTS & RESEARCH

Detonate Bot (Automated Malware Sandbox SaaS) | *FastAPI, Next.js, Docker, Frida, Celery, PostgreSQL*

- Engineered a full-stack automated sandbox pipeline processing real-time file payloads deployed across operational WhatsApp, Slack, and Telegram bot webhooks.
- Implemented Frida dynamic instrumentation to hook runtime checks, mask environments, and bypass anti-emulation evasion logic.
- Architected a distributed Celery queue to process tasks asynchronously and log kernel-level events via strace into PostgreSQL.

Transformer-Based HIDS Framework (Research Paper) | *Status: Under Review, Python, PyTorch*

- Implemented a robust Host-Based Intrusion Detection System (HIDS) utilizing a custom Transformer architecture to detect system-level anomalies.
- Conducted a performance benchmarking analysis evaluating the Transformer framework against traditional LSTM models.

Malware Behaviour Analysis | *Linux, Cuckoo Sandbox, Python*

- Architected an automated malware analysis system using Cuckoo Sandbox to safely isolate and monitor potential execution threats.
- Evaluated malicious behavior by parsing low-level API calls, network traffic patterns, and file system modifications to generate detailed threat reports.

Nirbhaya (Women Safety App) | *React, Node.js, Google Maps API*

- Developed a safety-centric routing application assisting users in selecting secure paths and modes for public transportation.
- Designed a predictive safety scoring algorithm to evaluate and recommend traversal routes based on real-time safety metrics.

CaBU (Ride-Sharing Platform) | *React, Firebase*

- Built a community-centric ride-sharing application addressing campus-wide commuter and transportation infrastructure challenges.
- Implemented real-time data synchronization pipelines using Firebase to ensure highly accurate, low-latency rider and driver tracking.

Automated Telegram Bots | *Python, python-telegram-bot*

- Engineered versatile Python automated scripts to manage high-volume community channels and streamline manual user interactions.
- Implemented efficient webhook command handling for fast database data retrieval, remote file management, and automated API parsing.

CERTIFICATIONS & ACHIEVEMENTS

- **Competitive Programming:** 250+ LeetCode Data Structures & Algorithms (DSA) problems solved.
- **Cyber Security:** Kali Linux - Penetration Testing Training (Infosys Springboard).
- **Data Structures:** DSA Specialist Training (Infosys Springboard).
